Plumbing & HVAC

HVAC –

The project was adding a new athletic center on to an existing building. The job consists of including four new rooftops, chiller plant, and boiler plant to the new building. The project had a two year duration and was finished on time.

PLUMBING–

Multi-phased Addition of an athletic center to an existing building. The addition included locker rooms and additional gang bathrooms totaling 100 fixtures as well as a new mechanical room with (2) water heaters and an ejector. The “summer slammer” portion of the scope required the new duplex water heaters in the mechanical room addition to be integrated with the existing building infrastructure and leave future connections for subsequent phases.
